The Copenhagen Diagnosis, 2009: Updating the World on the Latest Climate Science.

Figure 1: Global CO₂ Emissions from Fossil Fuels
Figure 2: Atmospheric concentration of carbon dioxide (CO$_2$) and methane (CH$_4$)
Figure 3: (Top) Mean temperature change between 1950’s and 2000’s: (Bottom) Global average temperature change from 1850
Figure 4: Global Temperature Change since 1980 from GISS data
Figure 5: Human versus Solar influence since 1980 and projections to 2030
Figure 6: United States climatic extremes since 1910
Figure 7: Contribution of glaciers and ice-caps to global sea-level
Figure 8: Greenland ice loss since 1960
Figure 9: Greenland ice-melt since 1979
Figure 10: Antarctic ice loss since 1960

Rate of mass increase (Gt/year)

Observation period

0.5 mm yr\(^{-1}\) sea-level rise
